

A collage of Cleanstar's Christmas party

## Cleanstar celebrates a successful year

The crew at Cleanstar wrapped up their 10-year anniversary celebrations with their annual Christmas party at the vibrant Ichi Ni Nana Japanese restaurant in Melbourne's popular Brunswick Street.

More than 40 staff members and their partners enjoyed delectable Japanese kobachi on offer alongside a beverage list comprised of Japanese inspired cocktails.

"The team reflected on another successful year as a leading Australian wholesale supplier of vacuum cleaners, spare parts and accessories," Cleanstar said.

"We also recognised how the introduction of a number of new and innovative products to the market in 2016, in response to growing demands from the local cleaning industry, contributed to our success."

## Compact Scrubmaster B75 R designed for array of sites

Thanks to its compact dimensions, Hako's operator-friendly Scrubmaster B75 R scrubber drier is capable of cleaning areas that could previously only be accessed using walk-behind machines.

The Scrubmaster B75 R's compact design is particularly suited for cleaning narrow aisles. The machine's track width is 76cm and the extra short squeegee ensures that driving through passages smaller than 80cm – for example in checkout areas – is no problem at all.

Due to the round 'reversible tail' and its short overall length, the machine can do a U-turn in aisles smaller than 180 cm.

An additional hand-held suction tool enables the removal of fluids in areas that cannot be accessed by the vehicle. When not needed, the tool can be stowed away safely in its own holder at the machine.

## Aussie Pumps aids war on mosquitoes

Flash floods and heavy rains often result in flooded buildings, inundated basements and swamped car parks. Left undrained, the stagnant water can become a breeding ground for disease-infected mosquitos, which can create potential health issues, especially in tropical parts of Australia and SE Asia.

To counteract the problems stagnant water poses, Aussie Pumps began offering the 'Puddle Sucker', a lightweight, single phase residue dewatering pump manufactured by Japanese company, Tsurumi.

"The Puddle Sucker is great at clearing pooling or stagnant water and is currently being deployed throughout SE Asia in the war on mosquitos," said Aussie Pumps product manager, Neil Bennett.

Weighing 12kg, the Puddle Sucker is portable, easy to set up and simple to prime. The submersible can produce flows of up to 170 litres per minute, with a head of up to 11 metres.
