

Compact ride-on designed for array of sites

The ride-on, operator-friendly Scrubmaster B75 R's compact design is particularly suited for cleaning narrow aisles. The machine's track width is only 76 cm and the extra short squeegee ensures that driving through passages smaller than 80 cm – for example in checkout areas – is no problem at all. The B75 R has a top speed of up to 5.5 km per hour in work mode while a powerful 180 Ah battery and 75-litre water tank provide long operating times.

Dust suppression lowers hazard risks

A surfactant-based dust suppressant, Suppress CP20 offers a safe, easy to use environmentally-friendly option for dust control. Uncontrolled dust exacerbates respiratory diseases such as asthma; reduces visibility leading to increased potential for accidents; and increases slippage hazards created by deposited dust. Suppress CP20 features a copolymer that binds soil together to help achieve dust reduction in the air. It provides excellent versatility, and has been developed for use in above-mine sites, on roads and graded tracks.

Vacuum and clean at same time

Cleanstar's Deluxe Microfibre Dust Mop vacuums and cleans at the same time. It features a front air inlet that allows dust to be vacuumed before the microfibre mop pad cleans the floor. The dust mop's neck (32mm width) is flexible, so allowing users to reach tight spaces. The microfibre pad is washable.

Backpack's low watt motor brings real benefits

With an 800 watt eco-friendly motor, the Aerolite Eco backpack vac uses less energy, which means savings on power and a reduced carbon footprint. The motor's lower operating temperature increases the machine's working life while its low wattage increases airflow and improves performance. Other Aerolite Eco features include a HEPA filter and vac and blower function.

Auto filter system for dust-free sweeping

Karcher's KM105 105cm ride-on vacuum sweeper is equipped with the highly effective, patented, fully automatic filter cleaning system for dust-free operation. The main roller brush is located on the rear axle which allows driving over bumps and kerbs without damaging the sweeping system. Its optional crescent side brush sweeps out corners and curves in a single pass. Available in low or high dump with hydraulic container lift.
