Cleanstar Presents...

The Lightest, Quietest, Strongest and Most Powerful Air Movers in the World.

XPOWER

Wonders of the Bird.

XPOWER, the most innovative Air Movers in the world. Here's 7 unparalleled reasons why XPOWER Air Movers are the best there is:

Lightest Air Movers in the world.

Problem: Traditional Air Movers can weigh a lot, due to the size of the motor and the use of heavy plastics. This makes them difficult to carry up and down stairs and makes work hard.

XPOWER Solution: Utilising powerful yet energy efficient motors, and strong, light ABS plastic, XPOWER Air Movers are the lightest! With the smallest Air Mover weighing in at a mere 5KG, they are absolutely perfect for anyone. Our largest and most powerful Air Mover still only weighs in at under 12kg.

Quietest Air Movers in the world.

Problem: Traditional air movers are known for making excessive noise.

XPOWER Solution: Expert engineering and design, along with super energy-efficient motors have led to XPOWER Air Movers being the quietest available on the market. XPOWER utilises balancing technology to ensure the motor runs smooth, without vibration.

Ultimate Durability - Strongest Ever

Problem: Fragile plastics in other Air Movers can break easily when dropped or misused.

XPOWER Solution: Using state-of-the-art injection mold technology, XPOWER offers Air Movers made with strong ABS Plastic - the same material used in NFL Football Helmets.

Search 'XPOWER Air Mover Testing' to witness it yourself!

Better for the environment and better for your bottom-line!

Problem: Large motors in other Air Movers can become costly and consume more energy.

XPOWER Solution: XPOWER Motors are small in size, efficient in operation and MIGHTY in power. Their small size not only weighs less and packs more power, but is also more energy efficient. Saving you money and saving the environment.

The Kickstand

Problem: Traditional air movers have limited angles to work with, restricting the direction of the airflow.

XPOWER Solution: XPOWER Air Movers have a kickstand which offers an extra 20° angle, which is perfect for drying furniture and other elevated objects. The Axial fan also has 360° rotation, which makes it perfect for all jobs.

Daisy-Chaining - Efficiency at its best

Problem: Traditional Air Movers can only be plugged into separate power outlets which requires more equipment and hassle to get the work done.

XPOWER Solution: Select XPOWER Air Movers have power outlets on-board, allowing them to be connected to each other. This increases the power of the air circulation to get the job done quicker, utilising the same power outlet and creating less mess with leads.

The Three-Hour Timer

Problem: Constant monitoring of jobs can lead to a sharp loss in productivity.

XPOWER Solution: Unique to the Air Moving industry, Select XPOWER Air Movers offer a three hour timer on each of their units. They can be programmed for up to 180 minutes, so you can leave the machine without worrying about turning it off within a specific time period.

The Many Uses for XPOWER Air Movers

Carpet Restoration

Designed for anything from small carpet spills to major floods, XPOWER Air Movers efficiently & effectively dry carpets with ease.

Paint Drying

Utilised by both home and professional painters to dry walls quickly and get the job done faster.

Garage Lifestyle

Marketed in the USA as 'The Ideal Machine for your Garage'. The Air Movers can aerate your garage, dry the inside of a flooded car and dry spills on the floor. Powder Coating/Hot Working Surfaces
Used by professional powder coaters to cool down hot surfaces after working on them.

High Velocity Fan

Can be used as a fan to cool down patios, verandas and other outdoor areas. Can also be used to exhaust smoke and odours from rooms.

Lightest in the world, pinky promise!
