

## Cleanstar offers comprehensive RCD range

Residual Current Detectors (RCDs) are now required in some states and territories in workplaces where 'plug-in' electrical equipment, such as a vacuum cleaner or a floor polisher, is used. Cleanstar is able to meet end-users' needs by offering a full range of RCDs.

Cleanstar points out that use of RCDs has been legislated in New South Wales and more states could be expected to follow.

An RCD is an electrical safety device designed to immediately switch off the supply of electricity when electricity leaking to earth is detected at harmful levels.

'RCDs will also detect a current imbalance and legislation indicates that they must also be installed on appliances with no earth,' points out Cleanstar.

There is a number of workplace operating environments in which RCDs should be used.

They include sites where electrical equipment is exposed to operating conditions that are likely to result in damage to the equipment (or reduce its expected life span) such as moisture, heat, vibration, mechanical damage, corrosive chemicals or dust.

RCDs should also be used when electrical equipment is moved between different locations in circumstances where damage to the equipment (or cord) is reasonably likely or where equipment is frequently moved during normal use.

## Enzyme Wizard...IT WORKS! Nature's Toughest Cleaner!

### Why Enzyme Wizard?

- ✓ **Multi-Enzyme Formula**
- ✓ Eco-Responsible
- ✓ pH Neutral Formulas
- ✓ 100% Biodegradable
- ✓ Non-corrosive
- ✓ Contains No Soaps
- ✓ Safer for Employees
- ✓ OH&S Approved
- ✓ Regulatory Compliant

Manufactured in Australia by Enzyme Wizard.
