

Kennards debuts onsite hire equipment management system

Kennards Hire has launched a new service to market, offering onsite solutions during scheduled site shutdowns, turn-arounds, rail possessions, and critical works and for both large and small project works requiring an onsite equipment hire solution.

The Kennards Hire Site Solutions (KHSS) is an onsite hire equipment management system that can be partnered with any project that requires tailored packages for an array of work sites.

KHSS staff can work with all Kennards Hire business units to provide a customised solution for client projects, identifying equipment requirements for projects of all shapes and sizes. From small one day projects with a handful of staff through to large year long projects with hundreds of staff, KHSS is available to make clients' jobs easy.

Solutions can be delivered via small site boxes, 20 and 40 ft containers, through to fitted out trailers for easy low cost mobilisation to site.

Specialised staff from KHSS will meet with client project teams before the project to confirm details including what equipment is required, the scope of work and if the KHSS requires Kennards Hire staff onsite and for what period/term of project.

KHSS is then able to stock equipment from across all Kennards Hire specialist and general hire offerings including Concrete Care, Rail, Lift & Shift, Test & Measure, Traffic, and Pump & Power. With the capability to be operational 24/7, KHSS allows access to specialist equipment for a variety of jobs.

Unstaffed options are available for smaller, more routine projects that only require products. With unstaffed KHSS options, additional products are available on call 24/7 and there is flexibility to extend or change products should the project needs change.

Detailed reporting is available for Kennards Hire staff managed KHSS throughout the duration of a shutdown or project, KHSS utilises its own fleet management system for effective shutdown/project analysis. The KHSS system software records and provides accurate and detailed reporting for every nominated person issued with a contractor card.

Compact Scrubmaster B75 R designed for array of sites

Hako presented its operator-friendly Scrubmaster B75 R scrubber drier for the first time at CMS. Thanks to its compact dimensions, the ride-on machine is capable of cleaning areas that could previously only be accessed using walk-behind machines.

The Scrubmaster B75 R's compact design is particularly suited for cleaning narrow aisles. The machine's track width is only 76 cm and the extra short squeegee ensures that driving through passages smaller than 80 cm – for example in checkout areas – is no problem at all.

If passages get even narrower than that, it only takes a few easy steps to dismantle the squeegee and store it on a special holder on the machine provided for that purpose. Due to the round 'reversible tail' and its short overall length, the machine can do a U-turn in aisles smaller than 180 cm.

An additional hand-held suction tool enables the removal of fluids in areas that cannot be accessed by the vehicle. When not needed, the tool can be stowed away safely in its own holder at the machine.

The Scrubmaster B75 R, however, cleans efficiently not only in confined areas. With a top speed of up to 5.5 km per hour in work mode, the machine's theoretical area performance is 3,500 sq m per hour. The powerful 180 Ah battery and the 75-litre water tank provide long operating times.

The back-friendly seat provides the kind of comfort required for fatigue-free working. Moreover, the driver's sitting position ensures a superior all-round view onto the entire working area when working in narrow spaces.

Cleanstar welcomes Peter Marsden to its growing sales team

National wholesaler of commercial and domestic vacuum cleaners, Cleanstar, has a new addition to its sales team – Peter Marsden.

Marsden has worked in the sale of cleaning equipment and associated spare parts industry for more than 20 years. He has extensive experience promoting and selling products such as large sweepers, scrubbing machines, vacuum cleaners and allied cleaning equipment to distributor networks, and industrial and commercial users.

"This experience, combined with a few years working with a large contract cleaning company and, most recently a vacuum cleaner and spare parts wholesale distributor, provides Peter with an excellent insight into the industry and the ability to develop successful sales relationships with both existing and new customers," shared Cleanstar's managing director/owner Lisa Michalson.
