

Battery powered Pacvac Superpro 700 boosts productivity

Pacvac's Superpro battery 700 is a lightweight, battery operated back pack vacuum. Users can increase their cleaning productivity while experiencing the freedom of vacuuming spaces with multiple obstacles and staircases with this limitless machine. The Superpro battery 700 comes with two batteries, providing up to one hour of run time while alleviating the worry of lengthy charging downtime, as each battery has a charge time of just two hours.

Portable Drymatic II an efficient moisture extractor

The Drymatic System efficiently extracts moisture from properties using controlled heat and air-exchange. The lightweight and portable Drymatic II structural heat drying machine features two modes. In Recirculation Mode the area is continuously heated up until either a temperature or humidity limit is reached. In Exhaust Mode, the warm, humid, air is exchanged with warm, dry replenishment air. The Drymatic II can cycle between these modes to maximise the amount of water removed from the area.

Designed for efficient small area cleaning

Karcher's BD 38/12 C scrubber drier is a highly professional and efficient machine for cleaning small areas and cluttered surfaces. Its lithium-ion battery has a long lifetime and can be fast-charged at any time, making it three times more durable than conventional lead-acid batteries. The ecoefficiency mode reduces energy consumption, increases the run time and lowers the noise level by about 40 percent.
